

LPN Practice and Treatment of Sexually Transmitted and Blood-Borne Infections

Guidance Document

College of Licensed
Practical Nurses of Manitoba
463 St Anne's Road
Winnipeg, MB R2M 3C9

CLPNM guidance documents are intended to promote understanding of the legislation and professional standards that apply to the practical nursing profession in Manitoba.

This guidance document is relevant to licensed practical nurses (LPNs) who participate in the treatment of sexually transmitted and blood-borne infections.

On May 30, 2023, Chief Provincial Public Health Officer signed a Public Health Order authorizing and directing communicable disease nurses, who are currently providing communicable disease responses services on behalf of a health authority, to comply with the following three protocols while attending to a patient:

[Communicable Disease Management Protocol - Chlamydia \(Chlamydia trachomatis\) Infection](#)

[Communicable Disease Management Protocol - Gonorrhoea](#)

[Communicable Disease Management Protocol - Syphilis](#)

The protocols contain information and practice directives for testing, treatment and reporting of these communicable diseases.

LPNs who practise through a health authority, or an entity funded by a health authority (see definitions below), and who are involved in the care of clients who present with symptoms of these diseases, must comply with the protocols.

LPNs must also self-assess and confirm that they have the competencies necessary to engage in the treatment of STBBIs under this order.

Online education to support nurses and organizations in use of the Order is available; however, this specific training is not required to practise under the Order if other approaches to ensure competency are in place. Information about the training, including dates, can be found on the [Government of Manitoba's Public Health website](#).

Note that LPNs administering medications, in accordance with the Public Health Order and the applicable protocols, do not require a client-specific order for the administration of medication to treat these infections. Please refer to the protocols for specific information.

The Order applies to a "communicable disease nurse," defined to include a person who is:
a) registered and authorized to practise as a licensed practical nurse in Manitoba, and
b) currently providing communicable disease response services on behalf of a health authority as defined in *The Health System Governance and Accountability Act*, the Government of Manitoba, the Government of Canada, an Indian Band or any entity funded by a health authority, the Government of

Manitoba, the Government of Canada or an Indian band to provide the services.

The Order, which was made under Section 44 of *The Public Health Act*, has been extended to May 31, 2025.
